Erasmus+

The main goal of the workshop is to share multidisciplinary researches between the most important schools of architecture in the Balkan Region and the School of Architecture at Politecnico di Bari. During the meeting, will be discussed different methodological approaches, both theoretical and practical, regarding the problem of the form of contemporary city and that of its spatial design.

In the framework of the Erasmus+ KA107 Programme, rather than scattering different visiting professors/researchers in different times from all over the partner countries, we propose an intensive event in the form of a workshop. It is to be articulated in lectures and design ateliers, as well as a place where to confront each other's ideas and exchange personal points of view by one's own research results.

The topic of the workshop will be the reuse of abandoned work spaces inside the city of Fasano (BR) or along its edge by the sea. Considered as potential resources for projecting the morphology of the city, these areas represent an important occasion to experiment new settlement and housing models, which should be capable to deal with sustainability needs as well as with the aspirations of our time to provide pieces of nature in the city.

In Puglia there are many urban and natural contexts characterized by the presence of disused plants (industrial, military, manufacturing areas, etc.). All of them are areas of "crisis" when addressing to the urban morphology. Once we are ready to give

these areas back to the city, a new debate on the urban form will be needed, and the creation of public spaces and facilities will be the occasion to design new theoretical models to be applied where those estate-driven processes, conducted in the last decades, failed. In particular, the workshop will focus on three areas in the territory of Fasano, with three very peculiar environments. One will be by the sea, completely apart from Fasano, where one can find the residual brownfields placed in a protected area. Another case study is to be found on the outskirts of the town, dealing with the topic of the limit between urban environment and countryside. The third area is a former productive building in the consolidated part of the urban fabric, dealing with high density and historical features.

The teaching and designing teams of the workshop will be composed of professors/researchers of the Politecnico di Bari and professors/researchers of the partner universities (University of Montenegro, University of Sarajevo, University of Belgrade, University of Kosovo, Polytechnic University of Tirana, Universiteti Marin Barleti, Epoka University, Polis University). The Italian and foreigners professors together will coordinate a team composed of two tutor and ten students from the Architecture school of Bari and from partner universities as recipients of an Erasmus mobility grant.

Politecnico di Bari

Hosting Institution

Dipartimento dICAR

Partners

University of Montenegro, University of Sarajevo, University of Belgrade, University of Kosovo, Polytechnic University of Tirana, Universiteti Marin Barleti, Epoka University, Polis University, Comune di Fasano (Br)

Scientific committee

F. Calace, F. Defilippis, A.B. Menghini, M. Montemurro, A. Nitti, M. Turchiarulo

Visiting professors

Lijljana Djukanovic - University of Belgrade, Serbia
Edmond Manahasa, Frida Pashako, Egin Zeka - Epoka University, Albania
Spartak Bagglamaja, Oltjon Luga - Universiteti Marin Barleti, Albania
Goran Radovic, Ratko Mitrovic - University of Montenegro, Montenegro
Ledian Bregasi, Saimir Kristo, Joana Dhiamandi, Endrit Marku - Polis University, Albania
Ledita Mezini - Polytechnic University of Tirana, Albania
Dukagjin Hasimja - University of Pristina, Kosovo
Mevludin Zecevic, Amir Causevic, Lemja Chabbouh Aksamija, Nerman Rustempasic, Senaida Halilovic - University of Sarajevo, Bosnia & Herzegovina
